

An executive dashboard that displays data, and value

FIND OUT HOW

Enterprise Health provides robust functionality to cover almost any reporting need — from meeting crucial compliance requirements to analyzing essential performance data. These reports translate data into **actionable information** to help keep your employees and the organization healthy.

Keep your C-suite in the know.

Enterprise Health's executive dashboard gives your organization's leaders the information they need to understand the clinic's value to employees and the business. On one screen, executives can see a high-level summary of critical information about clinic activity, outcomes and more. Information can be filtered based on time frame, location and employer organization for a more granular view.

Clinic visit activity

Quickly see analytics on clinic appointments and visits including the total number of scheduled, rescheduled and walk-in appointments, average visit time and average wait time. The dashboard also shows the percentage of visits that are occupational health-related.

Visit types

View numbers for the types of encounters — from surveillance, workers comp, pre-placement, injection, drug & alcohol, wellness, travel consult and more — to understand how employees are using the clinic.

Top 10 services/tests provided

See which services/tests your clinic provided the most for any chosen date range.

Health surveillance

Get a snapshot of health surveillance compliance with up-to-date info on the counts and percentages of employees enrolled in health surveillance panels in comparison to employee panel status.

Work-related injury or illness

Gain a better understanding of your organization's work-related injury and illness cases and how many resulted in lost time.

Disability/case management

Understand your organization's disability and case management with real-time views of lost time cases, cases with work restrictions, total number of lost days before return to work and days saved.

Portal activity

Measure portal activity including appointments made, questionnaires completed, number of employee portal visits, and number of manager portal visits.
