

Occupational health software that **speaks your language**, no matter **where you are**

[FIND OUT HOW](#)

Whether your employees are in the next building, the next state or the next continent, Enterprise Health's occupational health software solution enables you to improve health, wellness, productivity and efficiency throughout your organization — **throughout the world.**

An occupational health solution that extends to *wherever* you work.

Many leading corporations operate globally and need to manage the health of their employees in multiple locations around the world. Enterprise Health is a comprehensive occupational health software solution used by blue chip companies to track and manage health surveillance activities, worksite illness and injury data, and clinical care as well as prompt employees to become more active and engaged in health, wellness and compliance.

53

53 countries and 6 continents

Enterprise Health clients currently use the software to manage the health of their employees in more than 50 countries around the globe, with planned implementations in **10 more** in the coming years.

14

14 languages
